

NAVEEN KUMAR M

DATA ENGINEER

mediboyinanaveen98@gmail.com

+91 8096447374

SUMMARY

- Experienced Data Engineering with 4+ years of expertise in designing and implementing data pipelines and analytics solutions.
- Proficient in Google Cloud Platform (GCP) services including Google cloud storage (GCS), BigQuery, Cloud Composer (Apache Airflow), Cloud functions, Cloud Dataflow and Cloud Data Fusion, Astronomer.
- Skilled in building scalable, automated and efficient data systems.
- Experienced in migrating data from diverse source systems to GCP.
- Proficient in maintaining and optimizing Tableau dashboards and Looker Studio for performance and automation.
- Hands-on experience in UI/UX design of dashboards using Figma tool.
- Strong focus on automation, data quality and performance monitoring across data workflows.

TECHNICAL SKILLS

GCS (Google cloud storage)	Cloud Data Fusion	Tableau Desktop / Looker Studio
BigQuery	Cloud Composer (Apache Airflow)	Figma UI/UX
Data flow	Tableau prep	SQL (MYSQL), PostgreSQL
Cloud functions	GIT Labs	Python Scripting

PROFESSIONAL EXPERIENCE

ACL Digital

FEB 2026 - Present

Senior Data Engineer

Project - I

Client : Iron Mountain

Technologies:- GCS, Big Query, Astronomer, Google Looker Studio, SQL, Python

Roles & Responsibilities :-

- Designed, developed, and automated end-to-end data pipelines using Astronomer (Apache Airflow) to orchestrate data ingestion and transformation workflows.
- Built automated pipelines to extract required data from relational databases and ingest it into Google Cloud Platform (GCP) for downstream processing and analytics.
- Developed and maintained scalable data pipelines using GCP services such as Google Cloud Storage (GCS) and BigQuery.
- Implemented data transformation, cleansing, and validation processes to ensure data quality, consistency, and accuracy across source and target systems.
- Created and optimized BigQuery reporting tables to support business reporting and analytical requirements.
- Designed and developed Looker dashboards to provide meaningful business insights and support data-driven decision-making.
- Monitored and troubleshoot pipeline failures, implemented error handling, and optimized workflows to improve pipeline reliability and performance.

GCP Data Engineer

Project - I**Client :** Trane Technologies**Technologies:-** GCS, Big Query, Airflow, Data Fusion, SQL, Python, MS Excel**Roles & Responsibilities :-**

- Designed and developed scalable ELT/ETL pipelines using Apache Airflow.
- Google Cloud Data Fusion, and Tableau Prep to automate data ingestion, transformation and loading into Google Cloud Platform (GCP).
- Utilize Tableau Prep to perform data cleaning, shaping and combining tasks, enable smooth integration into Tableau dashboards and ensuring consistent data quality.
- Migrated business logics from Excel Macros to SQL-based workflows, enhancing performance, maintainability and cloud compatibility.
- Automated data validation and transformation tasks using SQL, Python ensuring high accuracy and reliability of datasets.
- Implementing email notification system with Airflow DAGs to send real-time alerts and record count summaries for pipeline monitoring.
- Developed and maintained interactive Tableau dashboards, with automated refreshes and drill-down capabilities to support data-driven business decisions.
- Led the UI/UX design and prototyping of new dashboards and internal data tools using Figma tool, improving user experience and adoption.
- Conducted regression testing on Excel files using advanced formulas to ensure data consistency between old and new versions.
- Collaborated with data analysis, business users and product team to gather requirements, optimize data flows and deliver scalable data solutions.
- Ensure best practices in pipeline orchestration, error handling, logging and scheduling using Airflow and GCP-native tools.
- Contribute to Schema design and performance tuning for BigQuery datasets to support large-scale analytics and reporting.
- Maintained comprehensive documentation and source control for all data workflows and dashboards.

INVENSIS TECHNOLOGIES PRIVATE LIMITED**JAN 2021 - MAR 2023**

Process Analyst

Project - II**Client :** Davey Tree**Technologies:-** GCS, Big Query, Airflow, Dataflow, SQL, Python, MS Excel**Roles & Responsibilities :-**

- Integrated LB-Telematics IOT devices with Google Cloud Pub/Sub to capture real-time vehicle data every 2 minutes.
- Streamed data directly from Pub/Sub into BigQuery for immediate processing and analytics.
- Applied advance SQL techniques on BigQuery such as Joins, Aggregation functions, Window functions and CTE.

- Transformed raw telematics data into a structured format for end-user reporting.
- Built final BigQuery tables and created views on top for reporting use.
- Scheduled daily queries to update the views regularly.
- Developed Cloud functions to automate weekly email reports to client managers and drivers every Monday at 8:00 AM EST using SendGrid and Python.
- Collaborate with Looker team to develop dashboards on top of the BigQuery views.

Project - I

Client : PrimaryBid

Technologies:- BigQuery, Airflow, CloudSQL, SQL, Cloud functions, Gsheets, Workday

Roles & Responsibilities :-

- Migrated diverse data sources including Gsheets, Tally, SurveyMonkey, HackerEarth, HubSpot and Adobe to Google Cloud.
- Loaded raw data from these sources into Google Cloud Storage (GCS) as a staging layer.
- Automated data transformation using Cloud functions, Orchestrated via Cloud Composer (Airflow).
- Processed transformation data and loaded into BigQuery as a curated dataset.
- Created BigQuery views to facilitate easy access and exploration of data.
- Created BigQuery views to facilitate easy access and exploration of data.
- Enable Tableau and Looker teams to consume insights from curated BigQuery datasets.
- Ensure smooth data flow raw ingestion to final visualization layer using GCP-native tools.

EDUCATION

- **Bachelor Of Science | Mathematics, Electronics & Computer Science** **2019**
ADI KAVI NANNAYA UNIVERSITY | Andhra Pradesh, India
